

Ethafoam Floor Application

Schematic Only – Not to Scale

The above are recommended techniques of edge treatment to ensure effective isolation from sound conduction. Ethafoam* installation is designed to be easily adaptable to masonry works and such method does not require specialist application and their related costs. In the event of doubt, MISB will assign a supervisor to train your gangers to supervise the works using general operatives to execute. All site conditions differ from each other. Examples of details provided are indicative only and are subjected to the approval of project consultants. It is important to note that there are no "hard and fast" rules to the installation methods and each application may have to be considered individually combining technical compliance as well as simplicity for site execution.
